HEALTH EFFECTS - MERCURY

- Loss in IQ
- Learning disabilities
- Autism
- Coronary artery disease
- Tremor
- Immune abnormalities
- Behavioral effects
- Visual field defects

OTHER FACTS

Mercury crosses the placenta and accumulates in fetal tissues.

1 in 6 women of childbearing age have elevated levels of mercury in their blood, putting 630,000 newborns at risk.

Health effects are observed at low doses.

Neurotoxic effects are irreversible.
